

VEHICLE INSPECTION CHECKS AND BENEFITS

GLASFIT

As part of our repair, replacement or installation services, your vehicle will undergo a

Pre-Inspection

before any work is started, and a

Post-Inspection

after service completion and before the vehicle is released back to you.

Glasfit technicians may not commence work on a vehicle before the Pre-Inspection has been carried out, and the Form signed by you, as the driver or owner, as acknowledgement of the inspection.

BENEFITS TO YOU – OUR VALUED CUSTOMER

Pre-inspection – which takes around 5 minutes – is performed by a qualified technician who assesses your vehicle against a pre-printed checklist to

- ✓ **identify potential factors which could affect successful service delivery**
eg windscreen bonding agents do not adhere to corrosion or rust
- ✓ **identify pre-existing exterior damage**
dents, scratches, missing or damaged parts, corrosion, windscreen moulding, etc
- ✓ **check the general condition of the interior**
including the upholstery, dashboard and hood lining
- ✓ **ensure that all mechanical and electrical items are in working order**
including light and rain sensors, electric windows/window winder mechanism, indicators and windscreen wipers. It may not seem essential in terms of the required service, but it's part of our intention to protect you and your vehicle and give you added peace of mind.

After the work's completion, and before the vehicle is released, the inspection process is repeated (using the same inspection form) to identify possible damage during the repair, replacement or installation process or while the vehicle was in our workshop.

Our technicians are highly skilled and thoroughly trained, so any damage is highly unlikely. These pre- and post-inspection checks are, however, additional precautions to ensure that both Glasfit and you, our valued customer, are satisfied with the condition of the vehicle once it is back in your possession.
